## Physics 11 U1 Kinematics Review Sheet

Name: $\qquad$

Show all your work, even write yourself some notes on your work, little mental reminders of what you are doing.

1. The frequency of a pendulum is 25 Hz . What is the period?
2. A pendulum swings 9 times in 31 seconds. Find the period and the frequency.
3. If a spark timer is set at 10 Hz how many dots does is make in 1 second? $\qquad$
4. A car travels at $120 \mathrm{~km} / \mathrm{hr}$ for 38 mins. How far does it go?
5. If a car travels 457 km at a speed of $124 \mathrm{~km} / \mathrm{hr}$ how long does it take?
6. A car travels at $14 \mathrm{~m} / \mathrm{s}$ for 122 seconds and then at $28 \mathrm{~m} / \mathrm{s}$ for 56 seconds.
a) What is the total distance covered for the entire trip?
b) What was the average speed for the entire trip?
7. A runner travels 1500 m in 190 seconds and then travels 1000 m in 133 seconds. Calculate the average velocity.
8. A cop times your car and finds that your car takes 4.6 seconds to cover 150 m . Are you speeding if the limit is $90 \mathrm{~km} / \mathrm{hr}$ ? Is the cop measuring your average or instantaneous speed?
9. Convert the following. Show the full conversion.
$20 \mathrm{~m} / \mathrm{s}=$ $\qquad$ $\mathrm{km} / \mathrm{hr}$
$120 \mathrm{~km} / \mathrm{hr}=$ $\qquad$ $\mathrm{m} / \mathrm{s}$
10. Identify the correct number of sigfigs.
a) 2001 $\qquad$ b) 2665 $\qquad$ c) 0.201 $\qquad$ d) 200 $\qquad$
11. Find the final velocity of a car if it accelerates at $2.3 \mathrm{~m} / \mathrm{s}^{2}$ for 11.1 seconds and starts at 2 $\mathrm{m} / \mathrm{s}$
12. A truck crashes into a hedge and de-accelerates at $31 \mathrm{~m} / \mathrm{s}^{2}$. The truck is originally going $100 \mathrm{~km} / \mathrm{hr}$.
a) How long does it take the truck to stop (time)?
b) What distance does the truck travel while stopping?
13. a) The slope of a distance vs time graph is ...
b) The slope of a velcity vs time graph is...
c) Draw a distance vs time graph that represents a car hitting a brick wall.
d) Draw a velocity vs time graph that represents a car travelling at a constant speed.
14. A runner accelerates from rest at a rate of $1.9 \mathrm{~m} / \mathrm{s} 2$. How long does the runner take to reach her top speed of $6.2 \mathrm{~m} / \mathrm{s}$ ?
15. A dragster accelerates from rest for 14.1 seconds at $10.4 \mathrm{~m} / \mathrm{s}^{2}$. How far does the dragster go?

How fast is the dragster going at the end?
16. How long does it take a rock to fall from a 243 m cliff?
17. Construct a graph with the equation of $v=\left(4 \mathrm{~m} / \mathrm{s}^{2}\right) \mathrm{t}+3 \mathrm{~m} / \mathrm{s}$
18. A ball is kicked at $32 \mathrm{~m} / \mathrm{s}$ at an angle of 25 degrees above the horizontal.
a) Find $V x$ and $V y$.
b) Find velocity at the very top of the flight.
c) Find flight time
d) Find max height
e) Find range, horizontal distance traveled
19. A ball is launched at $20 \mathrm{~m} / \mathrm{s}$ at an angle of 30 degrees above the horizon but its flight is interrupted by a tall wall at a distance of 6 m .
a) Find $V x$ and $V y$.
b) Find the time it takes to cover the $6 m$ to the wall.
c) Find the height of the ball when it hits the wall. (This one is tricky so don't fret if you do not get it)
