## Physics 11 Unit 4 Momentum Year End Review Sheet

Name: $\qquad$

Show all your work, even write yourself some notes on your work, little mental reminders of what you are doing.

1. Calculate the momentum of a 1800 kg car travelling at $28 \mathrm{~m} / \mathrm{s}$.
2. Calculate the momentum of a 2100 kg car travelling at $120 \mathrm{~km} / \mathrm{hr}$.
3. A 2 kg ball is initially at rest, the ball is struck and has a final velocity of $28 \mathrm{~m} / \mathrm{s}$. Find the impulse imparted on the ball. (impulse = change in momentum)
4. A ball is travelling at $29 \mathrm{~m} / \mathrm{s}$ east and comes to a complete stop. Calculate the change in velocity.
5. A ball is travelling at $15 \mathrm{~m} / \mathrm{s}$ east, the ball is struck and has a final velocity of $41 \mathrm{~m} / \mathrm{s}$ east. Calculate the change in velocity.
6. A ball is travelling at $18 \mathrm{~m} / \mathrm{s}$ east, the ball is struck and has a final velocity of $38 \mathrm{~m} / \mathrm{s}$ west. Find the change in velocity.
7. A 1200 kg car traveling at $24 \mathrm{~m} / \mathrm{s}$ hits a 2000 kg hippo traveling $20 \mathrm{~m} / \mathrm{s}$ head on. Assuming the car and the hippo "stick", what is the final velocity of the carnage?
8. A 1800 kg car travelling $120 \mathrm{~km} / \mathrm{hr}$ east hits a 2200 kg car travelling west at $130 \mathrm{~km} / \mathrm{hr}$. After the collision the car is travelling west at $15 \mathrm{~km} / \mathrm{hr}$. Find the final velocity of the truck.
9. A baseball player hits a stationary ball. The collision with the ball lasts 0.08 seconds. The 0.7 kg ball has a final velocity of $26 \mathrm{~m} / \mathrm{s}$. What was the average force during the collision?
10. A baseball player hits a 0.6 kg ball that was pitched at $90 \mathrm{~km} / \mathrm{hr}$. The collision lasts 0.07 of a second. The final velocity of the ball is $140 \mathrm{~km} / \mathrm{hr}$ back at the pitcher. What is the average collision force?
